

# You Don't Have to Suffer from Dry Eye and Blepharitis

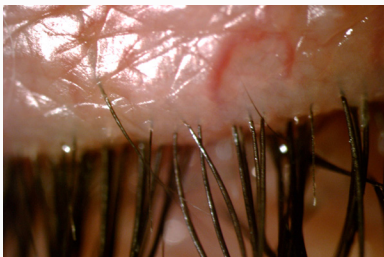

There's a NEW Solution to Treat Your Disease...

# BlephEx<sup>®</sup>

Healthy Lids for Life!

Before BlephEx<sup>®</sup> MBE Treatment

After BlephEx<sup>®</sup> MBE Treatment

## What is BlephEx<sup>®</sup> microblepharoexfoliation (MBE) treatment?

BlephEx<sup>®</sup> is the newest, state-of-the-art treatment for dry eye disease and blepharitis that for the first time allows you to take charge in your treatment. It is a simple 10 minute in-office procedure performed directly by us, your eye care professionals. The procedure effectively removes bacterial biofilm (crusty substances that accumulate over the years) from the surface of the lid margin and glands that aid in the production of your natural tears.

## How will it help your dry eye disease and blepharitis?

BlephEx<sup>®</sup> treatment will reduce or alleviate your chronic and debilitating symptoms. Just like your dentist removes plaque during a routine teeth cleaning visit, BlephEx<sup>®</sup> MBE treatments need to be repeated at regular intervals depending on severity of the disease.

By eliminating the inflammatory etiology of dry eye disease and blepharitis, the overall health of the eyelid is improved. You can then begin producing more of your own natural tears and enjoy significant relief from the chronic and irritating symptoms associated with dry eye disease and blepharitis.
